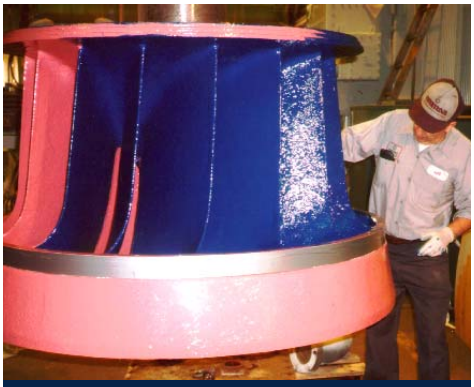
ARCOR® EPOXY TECHNOLOGIES

Industrial epoxy repair & protection

PIPE INTERNALS



PROCESS EQUIPMENT

TANK INTERNALS

Restore assets. Protect your operation.

Specialty epoxy coatings and restorative technologies for demanding industrial equipment and service environments.

01 Equipment restoration

Epoxy-based solutions for worn pump and pipe internals, tanks, and other industrial components.

02 Asset protection

Protective coating options for water systems, secondary containment, and high-wear service.

03 Application-specific fit

Match coating selection to the media, temperature, wear conditions, and movement involved.

04 Field-focused technology

ARCOR combines field application experience with epoxy technology, including 100% solids spray coatings.

Let’s talk about your next repair.

Where ARCOR can help

Start with the equipment, the service conditions, and the problem you need to solve.

APPLICATION	PROJECTS TO DISCUSS
Cooling & service water	Internal coating needs in cooling and service-water systems.
Pump & pipe internals	Restoration and protective lining of worn internal surfaces.
Tank internals	Lining selection for the stored media and operating conditions.
Secondary containment	Protective coatings for containment areas exposed to process chemicals.
High-wear systems	Epoxy restoration and protection for components exposed to wear.

Built around your service environment

Options for demanding operating conditions include:

- Salt & demineralized water
- Organic & inorganic solvents
- Flex & expansion
- Acids & caustics
- High temperatures
- High-wear exposure

Bring us your application

Share photos and the details below to help define the right coating or repair approach.

ASSET
Equipment, substrate & condition

SERVICE
Media, temperature & wear

SCHEDULE
Access, outage & return to service
